# Use Cases

Cart System:

In this use case it links the Online shopper, warehouse database, Website, and product database/inventory to the cart system along with the payment and product information requirements associated with it.
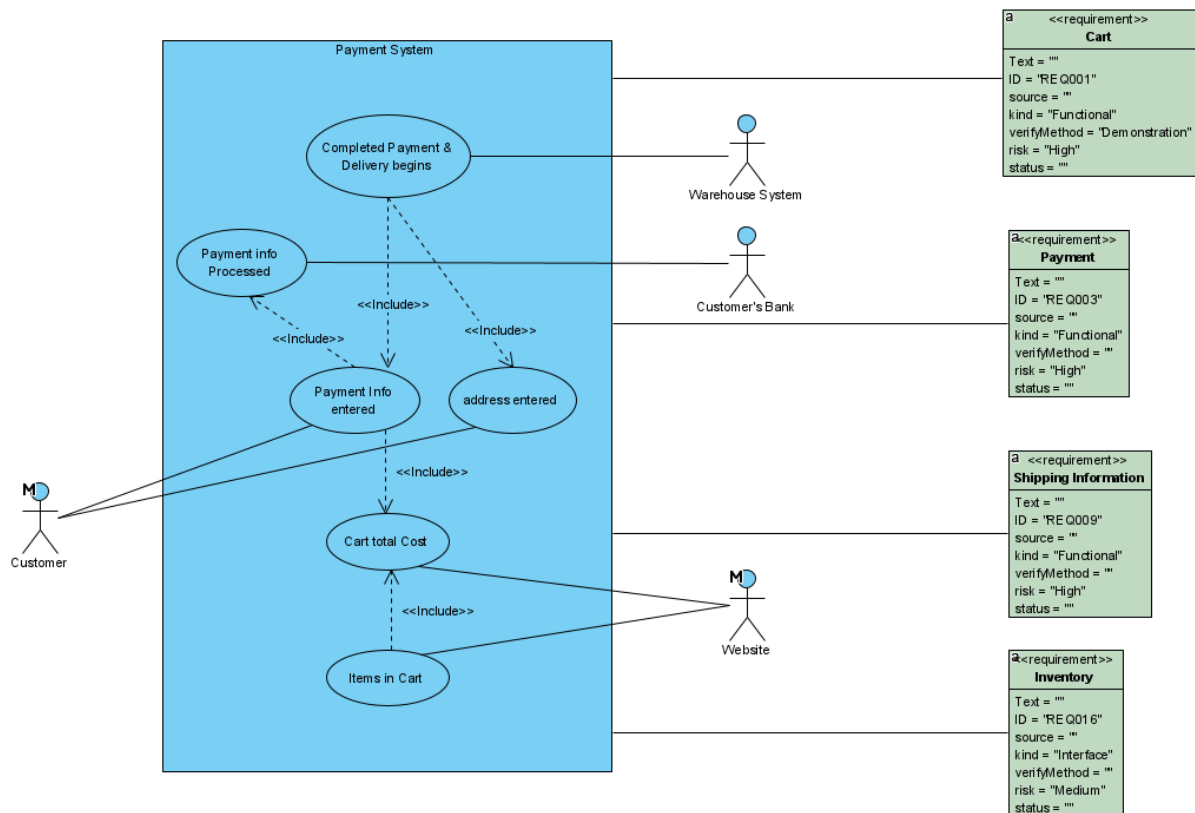

Delivery System:

In the use case diagram, the customer, warehouse, and website are related to the delivery system. The requirements linked to this are Delivery, Product information, Shipping information, Cart, and inventory.
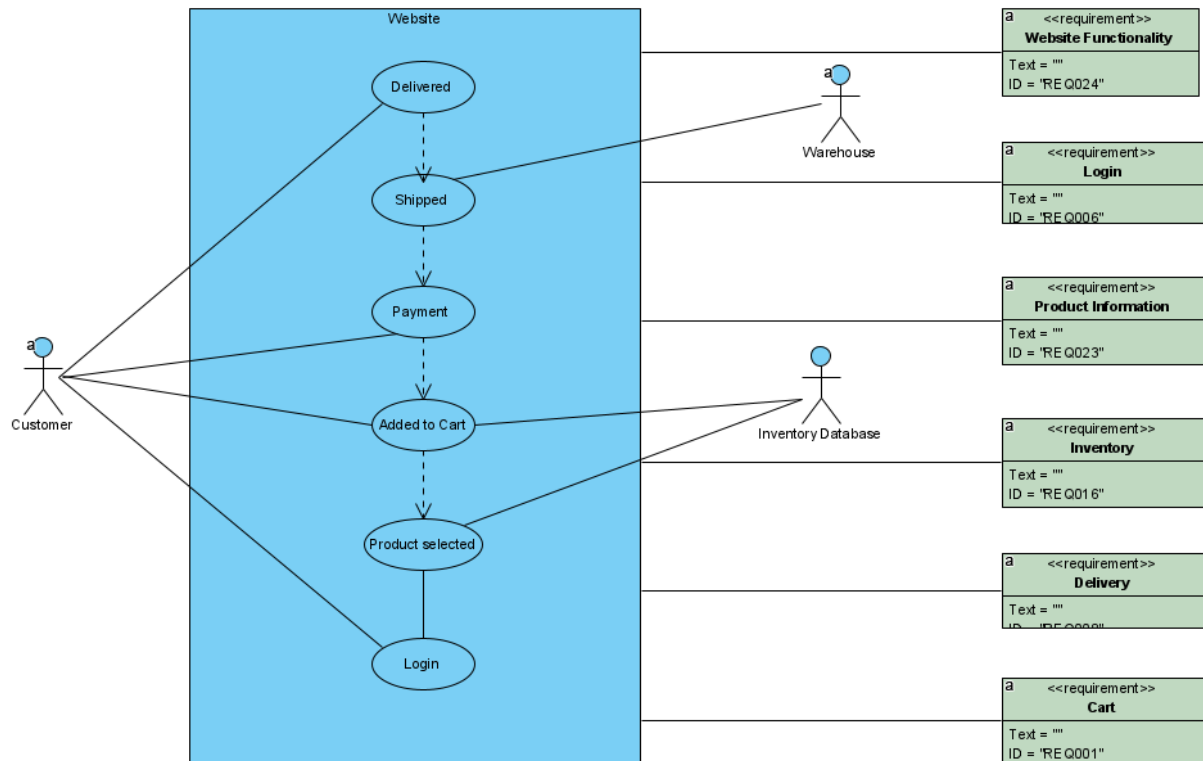

Inventory System:

Warehouse and website are associated and work directly with the inventory system while the requirements associated with it are website functionality.

Payment System

For the payment system the warehouse, website. Customer, and customers bank all act as important roles. Thus, these causes the Cart, payment, shipping info, and inventory requirements to be linked to it

Website

Finally, for the entire website, the customer, website, and inventory as well as the website functionality, login, product information, inventory, delivery, and cart requirements are associated
